Best Products Industry Can Offer

A forced air furnace is made up of several components including:

- heat exchanger
- fan center
- oil burner

Cold air enters the furnace through ductwork. It passes through the heat exchanger where it is heated. Then air travels through the ductwork to the vents.

Furnaces come in many configurations to suit the individual layout of your home. Some layouts require a 'highboy' or a 'lowboy' model. Small areas will benefit from a compact model. The size of the house also will influence the type of furnace we will recommend.

Hiboy model

Compact - ideal for small areas, this furnace can be suspended for horizontal and down flow.

Lowboy model

GRANBY - regular oil tank, widely used for domestic purposes. 12 gauge steel, 200 GAL (910 L). This bottom-fed tank is warranted by manufacturer for 10 years.

GRANBY 20+ specially treated/coated on outside to protect from corrosion. UV resistant with a high gloss finish. Manufacturer warranty 20 years. 200 & 250 GAL

The FIBERGLASS oil tank - corrosion resistant design doubles service life. UV and fire resistant material. Can be safely installed indoors or outside. 25 years limited warranty against corrosion. 200 & 250 GAL

FLOW-THROUGH HUMIDIFIER
This top quality and high capacity model provides maximum comfort and reduces energy cost.
